

COMPLETE CABLING EQUIPMENT (PTY) LTD

YARD TROLLEY

The yard trolley was designed to assist cable yard operations in speeding up the movement of drums to and from coiling machines. This is useful when forklifts are tied up or coiling machines are busy with long cut lengths as the drum can be rotated while on the yard trolley. This will be a manual operation but does give flexibility for short cut lengths. Sturdy wheels allow the trolley to be moved around in the yard as a one man operation.

The frame is manufactured from structural steel and fitted with a stepped shaft holder to accommodate different size drums. The unit comes complete with shaft and can be finished in any standard paint colour, powder coating or electroplating.

Ideally the yard trolley can move drums with a maximum diameter of 1,00 meter and a width of 1,00 meter. Maximum weight of drums to move is 300 Kg.

The yard trolley is manufactured on order only with a standard lead time of 2 weeks from receipt of order applicable.

Customers who purchase yard trolleys also look at the following products

- Cable measuring meters
- Hand turned coils and stands
- Cable drum jacks
- Cable coiling machines
