

COMPLETE CABLING EQUIPMENT (PTY) LTD

MU50 CABLE MEASURING METER

The MU50 is used for the accurate measurement of cable, rope, hose, etc, from 2mm outside diameter up to 50mm. The adjustable guides ensure straight travel of the cable through the meter. The aluminium measuring wheel is directly connected to the re-settable counter and spring loaded to ensure good contact between wheel and cable. The meter can be bench mounted or fitted to a fabricated stand to give a convenient operating height.

Measuring meters can be fitted with aluminium, rubber or steel hardened wheels. Steel hardened wheels are recommended for use in measuring bare conductors. All measuring meters must be calibrated every six months and can only be done by CCE at the factories based in Alrode South. Meters not having a valid calibration certificate will be quarantined and removed from service by the SABS and or NCRS.

All the CCE measuring meters are finished in powder coating. Spares and components are kept in stock allowing quick turnaround times for service and repairs. New meters are generally available ex stock but should it not be the case a lead time of 3-5 working days is applicable.

Customers buying cable measuring meters also look at the following products

- Hand turned coils and stands
- Cable drum jacks
- Mobile coiler
- Drum rotators
- 2X2 Drum coiler
- Racking and shelving
