

COMPLETE CABLING EQUIPMENT (PTY) LTD

LIGHT MAST TRAILER

The light mast trailer has been designed for use in open cast and pit mining. This unit is manufactured from structural steel and can be finished in any standard colour. Each light can be adjusted independently both vertically and horizontally in order to maximize angles in the pit areas. Standard lights of 2,000 watt metal halide are fitted. In order to maximize electrical phases available it is recommended to stay with 3 lights per tier. The number of lights used per mast is determined by the pit or site area taking in consideration elevations and other obstructions.

Stabilising legs are fitted to the four corners to give extra stability when the light mast is in use. A turntable allows for easy site maneuverability using standard dozers or front end loaders available in the pit or on site. Power packs can be fitted to the trailer alternatively on site power should suffice.

Light mast trailers are manufactured on order only. Standard manufacturing lead time for this product would be 6-10 weeks depending on the final configuration. This is a site trailer only and cannot be used or towed on public roads.
