

COMPLETE CABLING EQUIPMENT (PTY) LTD

1 TON CABLE PULLING WINCH

The 1 ton cable pulling winch has been designed to accommodate easy maneuverability on site, in buildings and manholes. The base frame is generally designed to fit customer requirements. This will include fitting on LDV's, different manhole sizes, indoor cable pulling applications, vertical up and down cable pulling operations as well as general horizontal pulling operations.

The winch can be powered by petrol or diesel motors and comes standard with a storage drum fitted with 100 meter 8 mm diameter non spin wire rope. Due to the simplistic design the 1 ton winch can be a one man operation provided that all suitable accessories such as rollers, swivels and pulling socks are utilised in the operation.

All components are manufactured in house ensuring speedy supply and maintenance of the winch should maintenance be required. All open drives are protected by suitable guards. The winch can be finished in any standard colour paint, powder coating or galvanised.

Winches are manufactured on order only with a standard lead time of 3-4 weeks subject to engine choice and availability.

Customers who buy 1 ton cable pulling winches also look at the following products

- Cable laying rollers
